Junior Associate – Industrial Technologies

Description

For one of its clients – an international player engaged in the manufacture of electrical devices and sale of related services – Artemys is looking for recent graduates for the position of **Junior Associate for Industrial Technologies**, who are ready to learn, try and grow.

Location: **Flemish Brabant**

As **Junior Associate for Industrial Technologies**, you will attend a one-year **Young Graduate Programme**, which offers you an opportunity to embark on a journey of continuous learning while gaining work experience and growing professionally.

The **Young Graduate Programme** allows you to work and learn at the same time. In other words, you will do an internal internship in one of the company's departments, during which you will be entrusted with strategically important projects. You will work on these projects as part of a team, and company management will be your mentors. In addition, you will have regular training sessions, remote and face-to-face, that will help you develop both soft and hard skills.

By the end of the **Young Graduate Programme**, you will:

- Touch and try out different activities
- Choose and build your own career path within the company
- Embrace company core values: Audacity, Customer Focus, Ownership & Responsibility, Everyday Learning, and Diversity

Responsibilities

As **Junior Associate for Industrial Technologies**, you will:

- Work for one of the most important and quality players in the world of energy
- Be continuously trained in order to develop expertise in different electrical environments, with different products and solutions including medium voltage equipment and installations
- Provide technical support to various partners/clients on various products and solutions
- Perform various hands-on interventions on mainly industrial electrical components (commissioning, start-up, maintenance, troubleshooting, installation, interventions...)
- Conduct audits on several sites
- Be able to understand key needs and requirements of each project; help define technical solutions for complex and integrated project opportunities
- Be able to detect defective material and take the necessary actions to organise the repairs
- Be able to work alone or in a team and receive support from various services (planning, sales, technical...)
- Increase your knowledge of electrical and/or mechanical codes

Employment Type

Permanent contract

Duration of employment

Undetermined

Job Location

Flemish Brabant

Date posted

9 August 2021

[Apply now](#)

- Be able to properly document all your interventions

Qualifications

- You have A2 or A1 in electricity, electronics or mechanics with experience in hands-on work
- You have a good sense for working with electricity and with industrial components
- You are open to continuous learning and professional development
- You are customer-oriented and you can work alone or in a team
- You speak Dutch fluently; knowledge of French and English is a plus

Job Benefits

- A full-time employment contract
- A full compensation package with a range of benefits, including a company car
- An opportunity for personal growth and development while working as part of a dynamic team in a fast growing and challenging business domain
